

Summary

Seasoned software engineer leading projects that generated over \$540M in annual revenue. Skilled in RESTful APIs, Elastic Search, Spring Boot, and large-scale system design, building innovative search and discovery solutions. A Committed team player, focused on solving complex problems and driving business growth.

Skills

Technical Skills: Algorithm Design and Analysis, Object Oriented Programming, APIs and web services, Testing, Debugging, Version Control, CI/CD, Agile Methodologies, HBase, Kafka, BERT, Flask, Data Visualization

Programing Languages/ Frameworks and Tools: Java, C++, C, Python, SQL, Elastic Search, Solr, Open Search, Git, Spring Boot, RESTful API, GraphQL, Kubernetes, Terraform, DropWizard, JIRA, AWS, GCP, Linux, Maven, Gradle, Jenkins, JUnit, Django, D3.js

Work Experience

Software Engineer II (Delivery Hero) Dynamic Filters - JAVA, Open Search, GraphQL - Collaborated with product managers and brand engineers from Talabat and Glovo to deeply understand requirements and integration capabilities. - Designed and architected a pluggable and scalable solution for dynamic filters, enabling seamless adoption by multiple brands' codebases. - Led cross-companies technical alignment and implementation to ensure robust, scalable integration that drove up revenue by 6%. Nested Vendor Search Optimization - JAVA, Elastic Search, GraphQL - Identified the computational inefficiencies in nested search queries by analyzing request patterns and cluster-level performance metrics. - Re-architected Elasticsearch query strategies, eliminating redundant computations and restructuring data retrieval for optimal execution. - Achieved a 30% reduction in p99 latency, significantly improving the responsiveness and driving an incremental revenue uplift of EUR 7M.	Apr 2025 - Present
Software Development Engineer II (Flipkart) Multi Category Store - Spark, Python, Couchbase, JAVA - Developed a Spark job to process daily analytics and identify top-selling products, storing the results in Couchbase for efficient retrieval. - Enabled dynamic display of diverse subcategories for broad queries, helping users explore more options and make better purchasing decisions. Dynamic Sale Price - JAVA, Kafka, RESTful API - Collaborated with the product team to translate business requirements to technical specifications, enabling users lock-in the prices during the sale. - Designed and implemented search system changes to support token-based pricing for seamless integration. - Led the end-to-end development and deployment of the feature, enhancing customer experience and sales during the Big Billion Day sale event.	Aug 2024 - Mar 2025
Software Development Engineer I (Flipkart) Elite Brand Search - JAVA, HBase, RESTful API - Interfaced with the project managers to gain a comprehensive understanding of the project's goals through the Product Requirements Document. - Designed and built a novel feature allowing users to refine searches exclusively for premium brands, elevating the search and browse experience. - Integrated this feature with premium ads services, resulting in a remarkable monthly revenue surge of USD 1.5 million for the company. Semantic Matching - Solr, Zookeeper, RESTful API - Implemented semantic search using Solr's Dense-Vector data structure in Java, giving search results aligned with users' actual query intent. - Engineered robust pipelines to index 100M documents daily, and optimized Solr cores to facilitate for sub - 100ms retrieval of highly relevant results. - Attained significant business impact by eliminating null searches, resulting in an elevation of CTR by 2.85% and revenue growth by USD 44.12 million.	Jul 2022 - Jul 2024
Software Development Intern (Flipkart) Flash POC: Semantic Matching - Solr, Gradle - Researched and developed a POC semantic search feature, leveraging HNSW graphs to fetch 1000 relevant products accurately under 100 ms. - Sharded 50 million documents into multiple cores, managed by a zookeeper in a leader-follower design, to cater to up to 1000 QPS per system. Intelligent Product Insights - Python, JAVA, DropWizard - Developed and integrated the product page enrichment features using NLP and ML models to extract 50 keywords and summarize user reviews. - Optimized user experience by enabling review comparisons and in-depth product analysis, driving user engagement by 37 bps.	Jul 2021 – Jun 2022
Research Engagement (University College London, UK & TU/e, Netherlands) Sentiment-Driven Market Forecasting - BERT, Django, D3.js - Trained FinBERT on USA economic data and applied TF-IDF to get actionable visualization on top 100 keyword-sentiment pairs for global stock trends. Architectural Conformance Analyzer - RESTful API, Enterprise Architecture. - Created APIs to extract and categorize code from Bitbucket and assess conformance percentage between code and proposed architectural designs.	May 2021 – Jul 2021

Education

BITS Pilani (Birla Institute of Technology and Science), India Master of Science, Economics	Jul 2017 - Jun 2022
BITS Pilani (Birla Institute of Technology and Science), India Bachelor in Engineering, Computer Science	Jul 2017 - Jun 2022
